Kulya · Dialysis Copilot

Care doesn't end after dialysis.

Introducing Dialysis Copilot — AI that connects care.

M T W T F S S

● Dialysis unit · ○ Home, where most of the week happens

Speak. Document. Review. Understand.

PROBLEM

Fragmented care. Repeated work.

Nurse

Writes the session record by hand

Doctor

Re-reads notes to find what changed

Dietitian

Rarely sees what was actually eaten

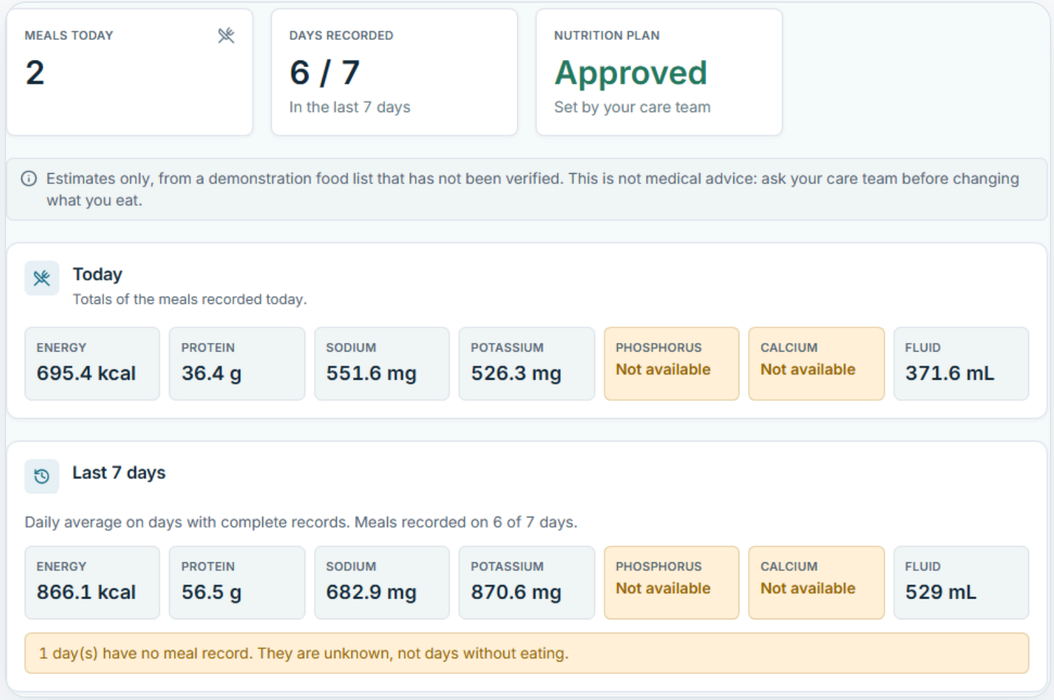

Patient

Goes home with questions

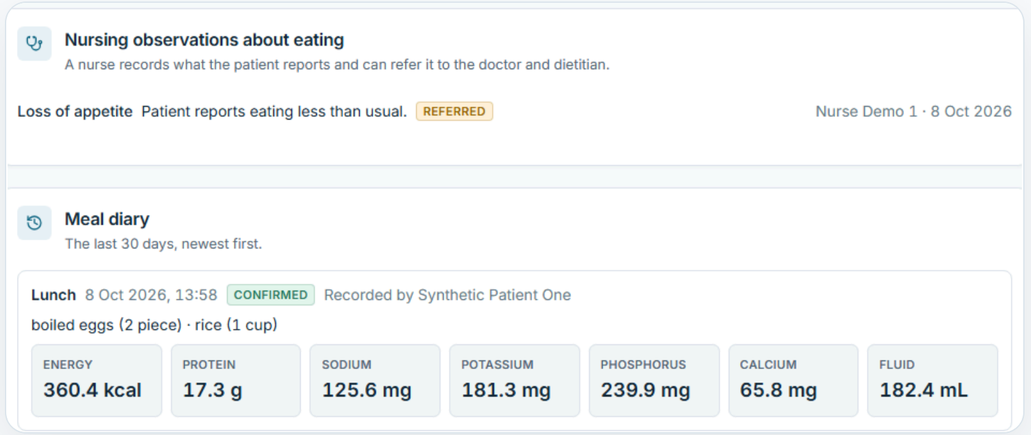

Information is spread across people and records, so work is repeated and follow-up gets harder.

SOLUTION

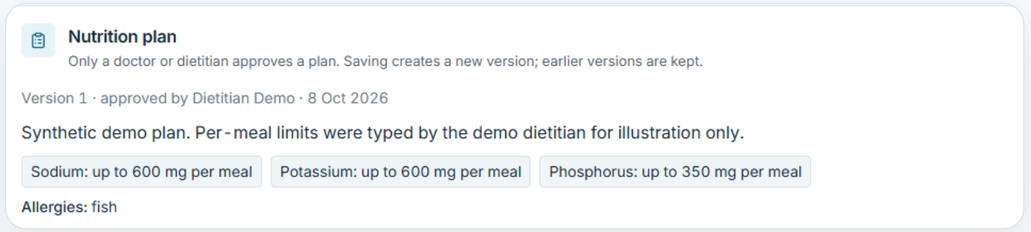

One connected care experience

Patient · sees today in one view

Nurse · refers an observation to the team

Care team · approves every plan version

Real screens from the Kulya web app · synthetic demo data

INNOVATION

AI turns records into actions

01 Human

Nurse speaks or types the note

02 AI

LLM structures it, quoting the source

03 Rules

Fixed checks for missing fields

04 AI

Retrieval finds the approved protocol

05 AI

LLM drafts a cited session summary

06 Human

Doctor reviews the record and draft

07 Rules

Workflow routes tasks and alerts

No autonomous treatment decisions

AI never writes vitals

Supervised pipeline · a person checks every AI output before it is used

LIVE DEMO · 75 SECONDS

Speak. Document. Review.

1 · Nurse

Records a note for a synthetic patient

2 · AI

Turns it into a structured draft

3 · Nurse

Checks each line, then saves

4 · AI

Prepares review findings and a summary

5 · Doctor

Opens the original record and review

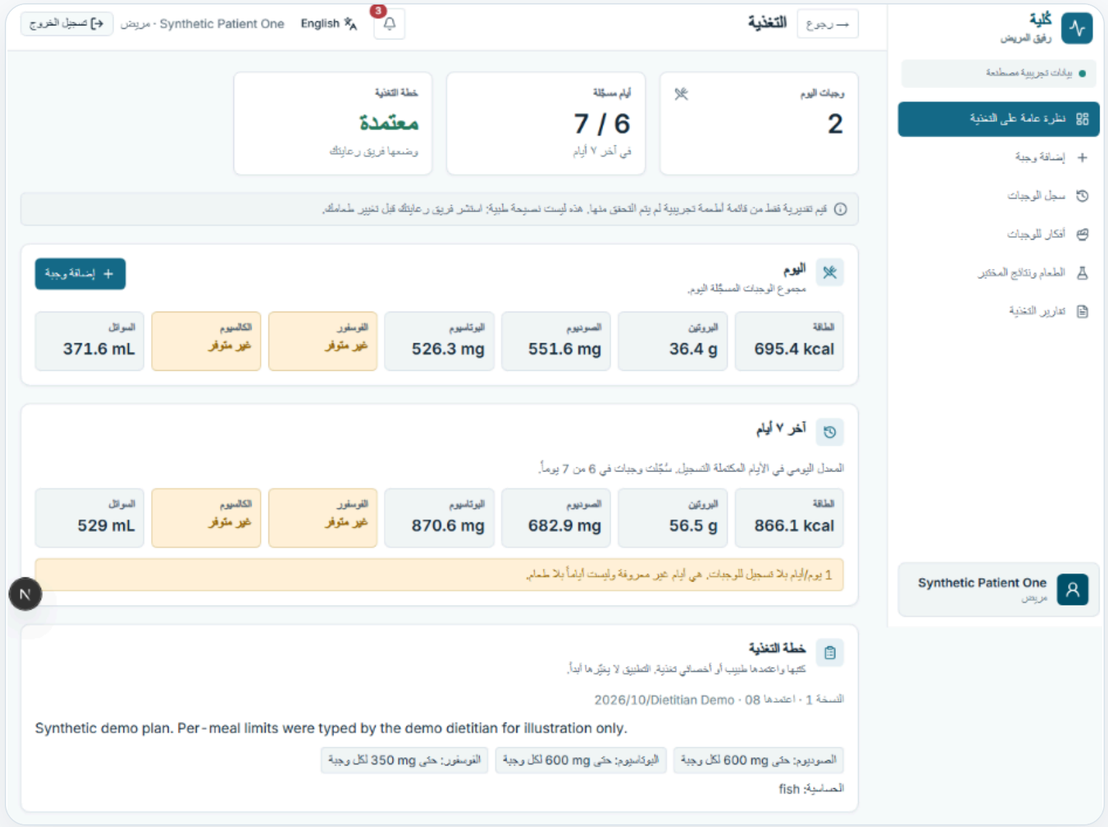

6 · Doctor

Asks the nurse to clarify

Synthetic patient · if the live AI call is slow, play the labelled backup recording

ACCESSIBILITY

Care everyone can understand

Arabic and English

One tap switches the whole app, right-to-left

Plain words

"Unknown, not days without eating"

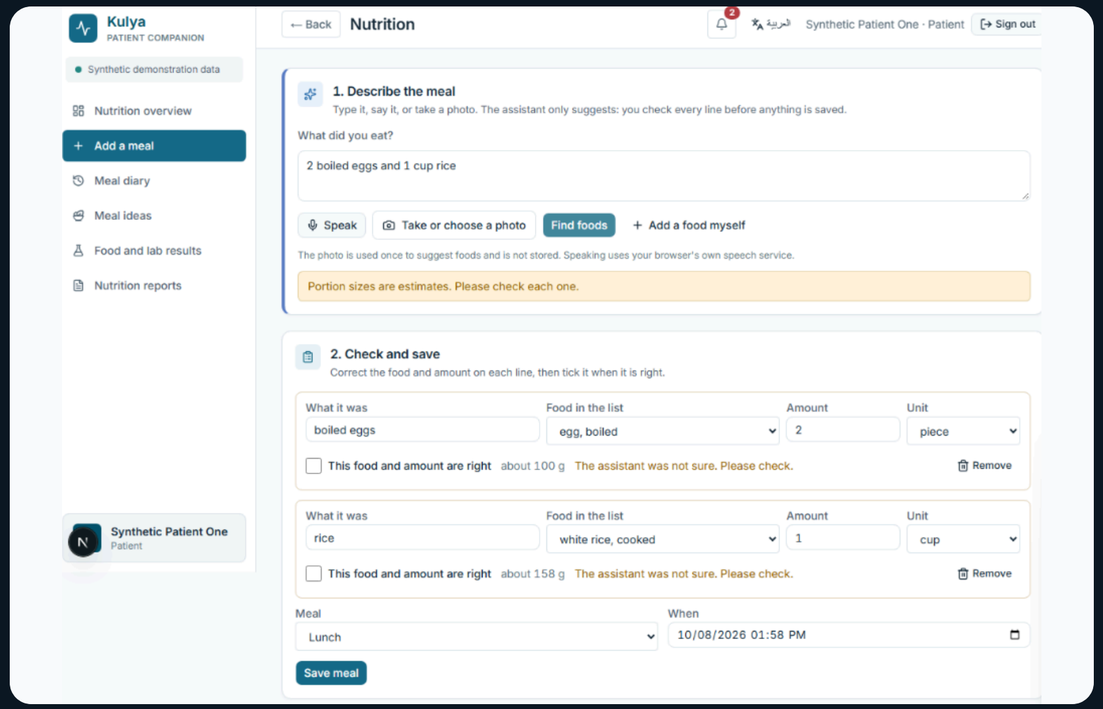

Only approved plans

Patients see what their care team signed off

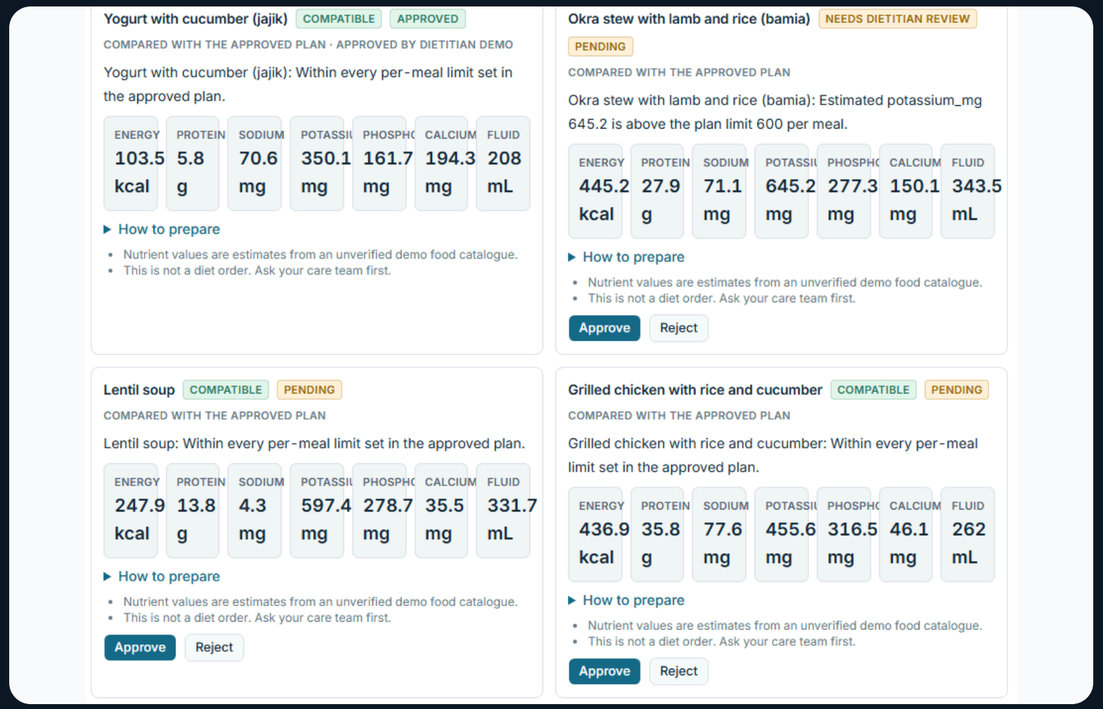

Real screen · patient view in Arabic · synthetic demo data

NUTRITION AI

From meals to better conversations

1 · Patient describes the meal. AI suggests foods; the patient confirms each line.

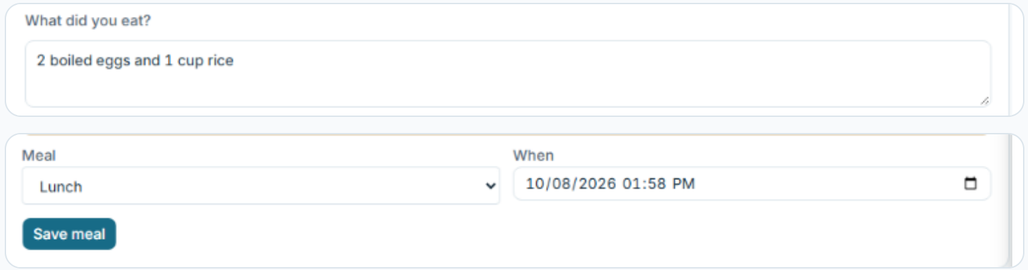

2 · Rules check the approved plan. The dietitian approves or rejects.

Estimates from a demo food list · not a diet order · a dietitian makes the call

EVIDENCE

Built. Demonstrated. Ready to validate.

PATIENT SAVES A MEAL

↓ CARE TEAM SEES THE SAME RECORD

PROOF · WORKING TODAY

Meal logging with confirmation · plan-limit checks · clinician approval · nurse referrals · Arabic and English

EVIDENCE · TO COLLECT NEXT

Interviews and observed workflows at a dialysis center

ASSUMPTION · NOT YET MEASURED

Time saved · extraction accuracy · older-patient task success

No clinical outcomes or time savings are claimed yet · all data synthetic

NEXT STEP

Let's pilot smarter dialysis care

01 · Pilot

One dialysis center, fully supervised

02 · Measure

Time, accuracy and ease of use

03 · Validate

Clinical safety of summaries and nutrition

We're seeking a dialysis-center partner and clinical reviewers.
